Equipment:

Navigation: Northstar Loran C 6000
Conductivity-Temperature-Depth (CTD): Neil Brown Instrument Systems Instrument modified to record light transmission with a Montedoro-Whitney transmissometer-nephelometer

Objectives:

The OCEANUS cruise was part of a continuing study of currents and sediment transport on the United States East Coast continental shelf. The purpose of the cruise was to:

1. Recover 4 tripod systems
2. Recover 3 current moorings (7 instruments)
3. Deploy 2 tripod systems
4. Deploy 2 current moorings (5 instruments)
5. Replace and repair surface marker buoys and lights as necessary
6. Obtain piston and hydrostatically dampened cores from 'mud patch' region south of Martha's Vineyard
7. Conduct hydrographic observations (temperature, salinity, light transmission and suspended sediment measurements)

13 May	0500	XBT, CTD section along shelf south of Martha's Vineyard
	1100	Commence coring operations in 'mud patch'
	2300	Terminate coring operations, underway to tripod Station E
14 May	0000	CTD wire termination bad
	0400	Complete new termination
	1000	Recover tripod at Station E (mooring 141)
		Weather deteriorating; conduct cross-shelf hydro transect to await weather for buoy work
15 May	1530	At Station B
	1628	Recover current mooring (mooring 146)
	1700	Recover tripod mooring (mooring 140)
	1855	Deploy tripod mooring (mooring 148)
	2042	Set subsurface current mooring (mooring 150)
		Surface grab sample
	2200	Underway; conduct cross-shelf CTD and XBT section
16 May	0200	Complete hydrographic section
	1300	Arrive 'mud patch' region, start coring operations
	2200	Finish coring operation
17 May	0200	Start CTD, XBT, transmission survey of mud patch
18 May	1100	Finish hydrographic survey
	1330	Arrive Woods Hole
