Here it is again... Let me know if you can read this...

U.S. GEOLOGICAL SURVEY
BRANCH OF ATLANTIC MARINE GEOLOGY

CRUISE REPORT

1. SHIP NAME (Parent vessel)/SUBMERSIBLE/OWNER-OPERATOR:
JEAN-A, owned and operated by the Puerto Rico Department of Natural Resources

2. CRUISE # AND LEG:
JENA 93-2

3. PROJECT # AND NAME:
9470-61053 Puerto Rico Insular Shelf Studies

4. FUNDING AGENCY:
Puerto Rico Department of Natural Resources and U.S. Geological Survey

5. CONTRACT (If applicable):

6. AREA OF OPERATIONS:
Insular shelf off Humacao, southeast Puerto Rico

7. DATES AND PORTS OF CALL:
November 06-10 Yabucoa, PR
November 10-11 U.S. Naval Base at Roosevelt Roads, PR
November 11-12 San Juan, PR for demobilization

8. CHIEF SCIENTIST(S):
Kathryn Scanlon

9. SCIENTIFIC PARTY (Names,affiliations,cruise duties):
Milton Carlo, USGS BAMG San Juan, geologic technician
Barry Irwin, USGS BAMG Woods Hole, navigation
Ken Parolski, USGS BAMG Woods Hole, electronics technician
Kathryn Scanlon, USGS BAMG Woods Hole, chief scientist
Juan Trias, USGS BAMG San Juan, geologist

10. SHIP'S CAPTAIN (and affiliation):
Richie ??????????, Puerto Rico Department of Natural Resources

11. PURPOSE OF CRUISE (brief statement)
To collect high resolution seismic reflection data and bottom samples in order to map the surficial sediments, geologic structure and morphology of the insular seafloor. Will be published as one in a series of geologic maps of the Puerto Rico insular shelf.

12. NAVIGATION TECHNIQUES:
Differential GPS, using land stations set up for this purpose at Punta Tuna lighthouse and Cerro las Pinas. We were also able to use a "mystery station", which may have been set up by NOAA for one of their ships that was also working in the area. Although we did not know its location, it gave a consistent and reliable signal.

13. SCIENTIFIC EQUIPMENT:
Huntec acoustic sound source with ORE Geopulse power supply and 10-element towed hydrophone array.
ORE 3.5 kHz sub-bottom profiler with 4 transceivers, towed astern, 15 feet below the water surface.
Shipek grab sampler.

14. TABULATED INFORMATION:

DAYS AT SEA:
6

CONTINUOUS DATA (in km):
167 km - high-resolution seismic reflection
167 km - 3.5 kHz subbottom profiler

STATIONS OCCUPIED (stationary and underway):
grab sample sites: 75 (numbered HK-48 to HK-122)
continuous seismic profile lines: numbered 1 to 27

SUBMERSIBLE DIVES (BY #):
not applicable

STATION INFORMATION:
